**PRELIMINARY RESULTS OF WORST-ARTISAN ANTERIOR CHAMBER IOL IN PHAKIC EYES**

Wilson de Freitas PURPOSE - To evaluate preliminary results of Worst-Artisan IOL in relation to safety, efficacy, predictability and stability. METHODS – A protocol study in 31 eyes undergoing surgery for correction of high ametropias. RESULTS – None of the patients lost line of vision. Some patients presented a significant loss of endothelial cells after 6 mo po. All patients were very satisfied with the procedure. CONCLUSION – Surgeon`s experience is very important for successful results. Patients satisfaction is very high.
