Influence of topical indomethacin on hypotensive effect of brimonidine

Sousa, A. K. S.; Freire, J. C. A.; Mello, P. A. D. A.; Paranhos Junior, A. ;

Purpose:

To evaluate the influence of the nonsteroidal anti-inflammatory indomethacin on the brimonidine intraocular pressure (IOP) lowering effect. Methods:

A randomized double-masked study was carried out. Patients medicated with timolol maleate 0,5% and needed complementary medication were random allocated into two groups: (a) brimonidine tartarate 0,15% and indomethacin 1% or (b) brimonidine tartarate and placebo (balanced saline solution). If patient's both eyes were eligible, they were allocated to the same group.
